

For app_cli.py, make sure you leave everything in there alone – simply copy and paste the new content. I have also added the updated app_cli.py file to canvas.

If you have build errors, go here and download the installer:

<https://visualstudio.microsoft.com/visual-cpp-build-tools/>

Then Run the installer and check **Desktop development with C++** in the workload list.

Then click install and wait

Then open up a new powershell and run *pip install -e .*

For the .wav file, download the .wav file I gave you then make sure it is under audio_files like this: projects\dsp26\audio_files\2086-149220-0033.wav

When it works, it should look something like this:
