

Midterm presentation rubric

Focus on the technique design of your project.

1. Technical Concept & System Overview (20%)	Problem and objectives are clearly defined; system overview well-structured and technically sound.
2. Design Approach & Rationale (20%)	Presents strong rationale for chosen approach (hardware, software, or algorithmic); shows understanding of alternatives.
3. Technical Feasibility & Planning (20%)	Clear breakdown of subsystems, development plan, and major technical challenges; identifies mitigation steps.
4. Early Progress & Prototyping Evidence (15%)	Shows early prototype, circuit test, simulation, or demo setup with good explanation. Or clear requirements if the project is still in very early stage.
5. Presentation & Communication (10%)	Clear, confident, within 5 min; all members contribute concisely. Engagement for audience.
6. Visual Aids & Presentation Effect (10%)	Slides are professional, visually clean, and technically focused with visual aid (e.g., block diagrams, flowcharts, 3D model, animation)
7. Engineering Insight & Next Steps (5%)	Demonstrates critical insight into design strengths/risks and outlines next technical milestones.
