

Project Functionality Rubric (Total: 100%)

1. Basic Requirements (60%)

- **Core Functionality (40%)**
 - Project performs the minimum required features correctly.
 - System runs without major errors or crashes.
 - Input/output operations work as specified.
 - **Usability & Reliability (20%)**
 - User can operate the system without confusion.
 - Functions produce consistent and correct results.
-

2. Intermediate Enhancements (20%)

- **Extended Features (10%) [listed in SRS or proposal documents]**
 - Adds useful functionality beyond the minimum (e.g., multiple modes, expanded input handling, automation).
 - Enhancements are relevant and improve the scope of the project.
 - **Efficiency & Optimization (10%)**
 - Code or design demonstrates improved performance, reduced redundancy, or scalability.
 - System shows robustness against edge cases or errors.
-

3. Advanced/Innovative Features (20%)

- **Advanced Functionality (15%) [listed or not in SRS or proposal documents]**
 - Incorporates complex or innovative features not required but beneficial.
 - Demonstrates mastery of tools/techniques (e.g., advanced algorithms, hardware integration, UI improvements).
- **Creativity & Impact (5%)**
 - Adds originality or creativity that makes the project stand out.
 - Shows potential for real-world application or significant extension.
