

Project Proposal (total 100%)

Project Name (2%):

Project Team Members (4%):

Problem Statement (24%):

What is the problem you are planning to solve?

Why is it a problem?

To fill out this section, do a review of the relevant literature in the project area. References can be placed at the end of this proposal.

What type of constraints the problem have? [eg: physical, cost, schedule, etc.]

Stakeholders (10%):

Who are the stakeholders?

Primary stakeholders:

Secondary stakeholders:

Proposed Solution (45%):

This defines the scope of the proposal.

What do you plan to cover, and what is out of scope?

What standards drive the solution? [eg, IEEE standard, FAA, FCC, ISO, etc.]

This is where you start identifying system functionalities that will be complete by the end of the semester and complete by the end of the year.

This describes your approach to the solution. For example, if you are planning to have an interactive map that displays specific information, if you will use a computer vision with camera to identify objects, if you plan to have the actual real data or simulated data, etc.

Semester 1:

Semester 2:

Proposed Project Budget (10%):

How much money is required to complete your project? Make a list of costs and what they are associated with, if applicable. *Note: If there is no budget required, state it here, and the 10% will be split to 3% problem statement, 3% stakeholders, and 4% proposed solution)*
