

Problem Statement & Motivation – 5 pts	Clearly articulates the engineering problem, end-user needs, and project motivation. Explains why the problem is important and how success is measured.
Project Design & Technical Content – 15 pts	Clearly describes the full project design, including what has been built and the final goal. Explains all major design decisions. Highlights design changes (requirement shifts, failed approaches, technical constraints) with strong justification. Shows evidence of engineering reasoning.
Results, Progress, and Demonstrations – 5 pts	Shows working prototypes, simulations, data, or test results. Demonstrates meaningful progress. Results are clearly connected to design goals.
Lessons Learned – 10 pts	Clearly identifies significant technical and collaboration challenges. Provides meaningful insights into what was learned and how the team adapted. Shows strong awareness of the engineering process.
Future Plans & Next Steps – 10 pts	Provides a well-defined plan for next steps with realistic goals and clear priorities. Shows strong understanding of remaining tasks.
Presentation Quality – 5 pts	Presentation is clear, organized, professional, and within time. Slides are clean and easy to follow.
